

Module 1 Cheat Sheet - Introduction to Linux

Linux terminal tips

Use **tab completion** to autocomplete pathnames and command names.

Scroll through your **command history** with the Up Arrow and Down Arrow keys to find and re-run a command you already used.

Getting information

Display the reference manual for the `ls` command:

```
1. 1
```

```
1. man ls
```

Copied!

Browsing and navigating directories

Special paths

Symbol	Represents path to
~	home directory
/	root directory
.	present working directory
..	parent of present working directory

List files and directories in the current directory:

```
1. 1
```

```
1. ls
```

Copied!

List files and directories in a directory:

```
1. 1
```

```
1. ls path_to_directory
```

Copied!

Return path to present working directory:

1. 1
1. pwd

Copied!

Change the current directory to a subdirectory:

1. 1
1. cd child_directory_name

Copied!

Tip: Because cd looks in the current directory for child_directory_name, you don't need to type the entire path.

Change the current directory:

Up one level: cd ../

To home: cd ~ or cd

To some other directory: cd path_to_directory

Change the current directory to another one at the same level:

Suppose you have two sibling directories within the same directory, dir_1 and dir_2, and your present working directory is dir_1. To switch to dir_2, enter:

```
cd ../dir_2
```

Tip: Using .., you don't need to know the path to the parent directory to switch to a sibling.

Change the current directory back to the directory you were in previously:

```
cd -
```

Upgrading and installing packages

Fetch and display up-to-date information about all upgradable packages:

1. 1
1. sudo apt update

Copied!

Upgrade to the latest supported version of nano:

- 1. 1
- 1. sudo apt upgrade nano

Copied!

Install Vim:

- 1. 1
- 1. sudo apt install vim

Copied!

Creating and editing files

Create a new text file and open it with nano:

- 1. 1
- 1. nano file_name.txt

Copied!

Tip: If the file already exists, nano simply opens it for editing.
